### PRODUCT SPECIFICATION

- The flooring shall be OHMega EC, as manufactured by Polyflor Ltd. of Manchester, England.
- The flooring shall be flexible PVC sheet flooring with electrostatic conductive properties in 2.0mm thickness.
- It shall be homogeneous and monolayer in construction with a conductive varnish.
- The electrostatic conductive properties must be present throughout the full product thickness.
- The flooring shall conform fully with the requirements of EN 649 / EN 10581 and ASTM F1913
- In respect of flame spread, the flooring shall be fully tested to EN 13501-1 and certified as having Class Bfl-S1, achieving the criteria EN ISO 9239-1 allikem²/day and the mandatory requirement of EN ISO 19925-2 pass. It shall be tested to ASTM E648 and certified as having passed with a Class 1 rating, making it suitable for use in institutional, commercial and public buildings.
- With regard to EN 1089 for slip resistance, the flooring shall be classified DS. It shall also be classified R9 for DIN 51130 making it suitable for use in areas which are predominantly dry, but with occasional spillage.
- The product must have been fully tested for abrasion resistance to the Frick Taber test EN 660 Part 2 and be in abrasion group P as defined in EN 649.
- With regard to electrostatic conductive properties, the flooring must conform to the requirements of HTM2. When tested to EN 1081 R1/R2 the flooring must have a resistance of between 10⁴ to 1x10⁶ ohms. When tested to ESD S7.1, the flooring must have a resistance of <10⁹ ohms. Tested to BS EN/IEC 61340-4-1, the flooring must have a resistance of <10⁹ ohms. When tested to BS EN/IEC 61340-4-5 the flooring must have a resistance of <10⁰ ohms.
- In accordance with EN 649/ISO 10581, the in-use classification must be at least 34/43 as defined in EN 685/ISO 10874: i.e. commercial areas with very heavy use; and light industrial areas with heavy use.
- The flooring shall be available in 2.0 metre width, to minimise the number of joints.
- In respect of light fastness, the flooring shall have been fully tested to ISO 105-B02 Method 3 and obtain ≥6.
- The flooring will achieve BRE Global Environment Generic A+ rating in the Green Guide to specification in major use areas such as education and healthcare.
- Generic EN 15804 Environmental Product Declaration (EPD) available on request.
- The manufacturer shall provide a facility to take back and recycle waste vinyl flooring material through the Recofloor scheme.
- The flooring shall be tested to and pass key independent, international standards for low VOC emissions.
- The manufacturer of the floorcovering must be in possession of a valid quality systems certificate, showing compliance with BS EN ISO 9001.
- A moisture test must be carried out to ensure that the subfloor has dried out to a level consistent with the application of vinyl flooring. The test should be carried out using a hygrometer, in accordance with the instructions in BS 8203. The result should not exceed 75% RH, once equilibrium has been achieved.
- The adhesive used must be approved by Polyflor, to ensure full product compatibility.
- Products must be fully conditioned to the environment in which they are to be installed, as outlined by Polyflor.
- Installation must be carried out in accordance with BS 8203 and the instructions of Polyflor, to ensure product performance and achievement of electrical results outlined above.
- All joints must be welded.
- At the date of issue the data presented is correct. However, Polyflor Ltd. reserves the right to make changes which do not adversely affect performance or quality.
- Polyflor ESD flooring ranges are compatible for use with the most commonly used alco-based hand gels and are suitable for steam cleaning on a periodic basis. For clarification and for information regarding handling and installation, adhesives, maintenance, applications, chemical resistance and product warranty consult Polyflor Customer Technical Services on +44 (0)161 767 1912, or email tech@polyflor.com.
