Withington Girls School Manchester, UK

PRODUCTS USED:
Polysafe Corona PUR

Heavy duty safety flooring from leading commercial vinyl flooring manufacturer Polyflor was recently installed as part of a refurbishment of the Chemistry department at Withington Girls' School in Fallowfield, Manchester.

Around 800m⁺ of Polysafe Corona PUR safety flooring in the grey Seal shade was fitted by Taylor Made Flooring of Swadlincote, Derbyshire to laboratories, classrooms and corridors at the independent day school for girls aged 7 to 18.

Part of the refurbished Senior School facilities, aspiring young scientists at Withington Girls' School will now benefit from three state-of-the-art chemistry laboratories which have been upgraded to university specification and feature Polysafe safety flooring.

These new laboratories along with other new buildings at the school formed part of a £5 million development project which was officially opened by HRH The Duchess of Gloucester in September 2015 to commemorate the 125th anniversary of the School's foundation.

Available in 12 shades featuring a multi-chip decoration, the Polysafe Corona PUR range of safety flooring fully complies with HSE and UK Slip Group Guidelines to give sustainable wet slip resistance throughout the guaranteed life of the product.
