

WOOSS

Wooss Café

Along a bustling thoroughfare in central Melbourne, Australia, lies Wooss Café, an attractive yet unassuming coffee shop offering a pleasant sanctuary from the outside world. To create such beneficial surroundings, Polysafe Stone fx PUR was specified, providing faultless accompaniment to the ambient décor.

Location: Melbourne, Australia

Products Used: Polysafe Stone fx PUR

Sector: Hospitality

Since opening, Wooss Café has established itself as a popular addition to Melbourne's hospitality sector, serving those who pass through the heart of the city. Thanks to expertly balanced design and functionality, the popular hotspot provides customers with a serene escape during their busy day.

Interior design was managed by locally based AXE Architects, overseen by Yew Hann Loo, Co-Founder & Managing Director, alongside Mei Tang, Project Leader.

Wooss Café was inspired by nature. The client wished for patrons to feel as though they were walking through a tranquil woodland. Rather than simply replicating this aesthetic, AXE Architects strived to encapsulate the atmosphere it holds.

To achieve this, they integrated lush landscaping, biophilic elements, curved timber forms, and earthy textures to shape the space. When supplemented by warm, natural materials and soft lighting, the result was a calm, organic environment in which patrons felt encouraged to slow down, connect, and enjoy their experience.

After carefully researching the most suitable flooring option for Wooss Café, AXE Architects proposed Polysafe Stone fx PUR.

In addition to its extensive colour palette, the client strongly favoured its versatility, which allowed for the creation of seamless, curved, or fluid floor patterns.

Overall, the flooring offered a smart, practical, and durable design solution, making it the ideal choice for this modern project.

Subsequently, AXE Architects specified a considered duo of Polysafe Stone fx PUR shades:

- Flagstone Grey (5091) – 45m²
- Clay Stone (5092) – 60m²

These complementary colour tones provide a soft, realistic concrete finish that contributes towards the warm, natural ambience within the café.

Beyond its stylish appearance, Polysafe Stone fx PUR offers sustainable slip resistance, meeting the high standards required to achieve 36+ on the wet pendulum test, which is guaranteed for the life of the product.

AXE Architects saw that such credentials made the flooring perfectly suited for high-traffic commercial settings such as Wooss Café.

Every detail of this modern hospitality project was thoughtfully considered, with the floor serving as a unifying element that adds elegance and safety underfoot.

Wooss Café beautifully exemplifies how well-researched material choices can create an immersive consumer experience.

“As architects, we value materials that balance design with performance. The wide range of high-quality, reliable vinyl flooring solutions from Polyflor, alongside the expert knowledge of their staff, has consistently helped us achieve both aesthetic and functional outcomes. They are trusted partners, and we confidently recommend them.”

Yew Hann Loo, Co-Founder & Managing Director, AXE Architects
